Subject Index

Aerial photography
A comparison of two subjective-index quality assessment methods (P), 1: 14–20

Archival stability
Stability of processed polyester base photographic films (P), 6: 160–167

Astronomical photography
Astronomical photography at 1.1 micrometers (P), 6: 167–170

Black-and-white paper
Discoloration of black-and-white photographic prints (P), 1: 1–9

Black-and-white processing
Processing black-and-white prints on paper base for permanence (N), 2: 64–66

Business graphics
Business and product trends for the future office environment (IT), 6: 180–183
Design of an impulse ink jet (P), 3: 73–79
Review of recent facsimile developments in Japan (T), 1: 21–29

Cameras
Camera image formats and their impact on photofinishing (IT), 2: 59–63
Digital data recording on Super 8 film cartridges with application in temperature logging (IT), 3: 93–96

Cellulose triacetate base
Stability of processed polyester base photographic films (P), 6: 160–167

Chemical analysis
Methods for analyzing silver in photographic processing solutions and effluents (P), 5: 126–129

Chemical characteristics
Chemical formulations and requirements of photographic paper (T), 3: 67–72

Color processing
Developer-regeneration system by electrodialysis for color paper processing (P), 2: 53–58
Ion-exchange silver recovery for process EP-2 with nonregenerated bleach-fix (P), 4: 106–110

Computers
Computerized job-scheduling system for multiple laboratories (IT), 1: 30–36
Design considerations for an intelligent high-speed image-scanning/recording system (IT), 4: 111–114

Copiers
New thermal multi-copy paper (P), 1: 10–14

Data processing
Computerized job-scheduling system for multiple laboratories (IT), 1: 30–36
Design considerations for an intelligent high-speed image-scanning/recording system (IT), 4: 111–114

Densitometry
Prediction of densities for mixed lights expected from colored lights by using mathematical models (P), 2: 49–52

Digital images
Review of recent facsimile developments in Japan (T), 1: 21–29

Digital imaging
Magnetic stylus recording (P), 2: 44–49

Digital recording
Digital data-recording on Super 8 film cartridges with application in temperature logging (IT), 3: 93–96

Dry silver processing
The application of directly heated photothermographic paper to echocardiology (P), 5: 129–132

Effluents
Fluidized-bed recovery of volatile organic solvents (IT), 5: 139–142
Ion-exchange silver recovery for process EP-2 with nonregenerated bleach-fix (P), 40: 106–110
Methods for analyzing silver in photographic processing solutions and effluents (P), 5: 126–129

Electrodialysis
Developer-regeneration system by electrodialysis for color paper processing (P), 2: 53–58

Electrographic printing
Magnetic stylus recording (P), 2: 44–49

Electrophotography
Electrical properties and imaging characteristics of CdS: Cu, Cl in the xerographic mode (P), 4: 102–105
The effect of the polymeric matrix, developer solvent, and field on liquid developed migration images (P), 5: 133–138

Emulsions
The prediction of optical density and granularity in processed monodisperse photographic emulsions (P), 6: 143–147

Facsimile
New thermal multi-copy paper (P), 1: 10–14
Review of recent facsimile developments in Japan (T), 1: 21–29

Film base
Stability of processed polyester base photographic films (P), 6: 160–167

Film manufacturing
The use of central composite experimental designs to improve quality control of photographic negatives (P), 3: 80–87

Granularity
The prediction of optical density and granularity in processed monodisperse photographic emulsions (P), 6: 143–147

History
The evolution of photographic base papers (IT), 4: 117–120

Holography
Holographic image-deblurring filter (P), 6: 151–159

Hypersensitization
Astronomical photography at 1.1 micrometers (P), 6: 167–170

Illumination
Prediction of densities for mixed lights expected from colored lights by using mathematical models (P), 2: 49–52

Image evaluation
A comparison of two subjective-index quality assessment methods (P), 1: 14–20
An analysis of edge raggedness and blur (P), 6: 148–151

Image permanence
Discoloration of black-and-white photographic prints (P), 1: 1–9
Processing black-and-white prints on paper base for permanence (N), 2: 64–66

Image restoration
Holographic image-deblurring filter (P), 6: 151–159

Ink jet printing
A review of ink jet printing (I), 5: 121–125
Design of an impulse jet (P), 3: 73–79

Lasers
Design considerations for an intelligent high-speed image-scanning/recording system (IT), 4: 111–114

Market research
Business and product trends for the future office environment (IT), 6: 174–179

Mathematical modeling
Atmospheric corrections to satellite images in the presence of thin clouds (P), 6: 174–179

Subject Index

Aerial photography
A comparison of two subjective-index quality assessment methods (P), 1: 14–20

Archival stability
Stability of processed polyester base photographic films (P), 6: 160–167

Astronomical photography
Astronomical photography at 1.1 micrometers (P), 6: 167–170

Black-and-white paper
Discoloration of black-and-white photographic prints (P), 1: 1–9

Black-and-white processing

Electrophotography
Electrical properties and imaging characteristics of CdS: Cu, Cl in the xerographic mode (P), 4: 102–105
The effect of the polymeric matrix, developer solvent, and field on liquid developed migration images (P), 5: 133–138

Emulsions
The prediction of optical density and granularity in processed monodisperse photographic emulsions (P), 6: 143–147

Facsimile
New thermal multi-copy paper (P), 1: 10–14
Review of recent facsimile developments in Japan (T), 1: 21–29

Film base
Stability of processed polyester base photographic films (P), 6: 160–167

Film manufacturing
The use of central composite experimental designs to improve quality control of photographic negatives (P), 3: 80–87

Granularity
The prediction of optical density and granularity in processed monodisperse photographic emulsions (P), 6: 143–147

History
The evolution of photographic base papers (IT), 4: 117–120

Holography
Holographic image-deblurring filter (P), 6: 151–159

Hypersensitization
Astronomical photography at 1.1 micrometers (P), 6: 167–170

Illumination
Prediction of densities for mixed lights expected from colored lights by using mathematical models (P), 2: 49–52

Image evaluation
A comparison of two subjective-index quality assessment methods (P), 1: 14–20
An analysis of edge raggedness and blur (P), 6: 148–151

Image permanence
Discoloration of black-and-white photographic prints (P), 1: 1–9
Processing black-and-white prints on paper base for permanence (N), 2: 64–66

Image restoration
Holographic image-deblurring filter (P), 6: 151–159

Ink jet printing
A review of ink jet printing (I), 5: 121–125
Design of an impulse jet (P), 3: 73–79

Lasers
Design considerations for an intelligent high-speed image-scanning/recording system (IT), 4: 111–114

Market research
Business and product trends for the future office environment (IT), 6: 174–179

Mathematical modeling
Atmospheric corrections to satellite images in the presence of thin clouds (P), 6: 174–179

Design of an impulse ink jet (P), 3: 73–79
Microdensitometer transfer functions for a slit aperture with random angular misalignment (P), 4: 97–101
Prediction of densities for mixed lights expected from colored lights by using mathematical models (P), 2: 49–52
The prediction of optical density and granularity in processed monodisperse photographic emulsions (P), 6: 143–147

Microdensitometry
Microdensitometer transfer functions for a slit aperture with random angular misaligment (P), 4: 97–101

Migration imaging
The effect of the polymeric matrix, developer solvent, and field on liquid developed migration images (P), 5: 133–138

Non-impact printing
A review of ink jet printing (T), 5: 121–125
Magnetic stylus recording (P), 2: 44–49

Optics
Microdensitometer transfer functions for a slit aperture with random angular misaligment (P), 4: 97–101
The prediction of optical density and granularity in processed monodisperse photographic emulsions (P), 6: 143–147

Paper
Chemical formulations and requirements of photographic paper (T), 3: 67–72
Processing black-and-white prints on paper base for permanence (N), 2: 64–66
The evolution of photographic base papers (IT), 4: 117–120

Photofinishing
Camera image formats and their impact on photofinishing (IT), 2: 59–63
Computerized job-scheduling system for multiple laboratories (IT), 1: 30–36
Developer-regeneration system by electrodialysis for color paper processing (P), 2: 53–58
Ion-exchange silver recovery for process EP-2 with nonregenerated bleach-fix (P), 4: 106–110

Photolithography
Recent developments in polymeric resist materials (T), 2: 37–44

Photoresists
Recent developments in polymeric resist materials (T), 2: 37–44
The reduction of the standing-wave effect in positive photoresists (N), 6: 184–186

Photothermography
New thermal multi-copy paper (P), 1: 10–14
The application of directly heated photothermographic paper to echocardiology (P), 5: 129–132

Physical characteristics
Chemical formulations and requirements of photographic paper (T), 3: 67–72

Polyester base
Stability of processed polyester base photographic films (P), 6: 160–167

Printers
Camera image formats and their impact on photofinishing (IT), 2: 59–63

Quality control
A comparison of two subjective-index quality assessment methods (P), 1: 14–20
Quality assurance in the photographic industry (IT), 4: 114–117
Quality control in manufacturing photosensitized materials—Japanese approach to quality control (IT), 3: 88–93
The use of central composite experimental designs to improve quality control of photographic negatives (P), 3: 80–87

Recording systems
Digital data-recording on Super 8 film cartridges with application in temperature logging (IT), 3: 93–96

Regeneration techniques
Developer-regeneration system by electrodialysis for color paper processing (P), 2: 53–58
Ion-exchange silver recovery for process EP-2 with nonregenerated bleach-fix (P), 4: 106–110

Remote sensing
Atmospheric corrections to satellite images in the presence of thin clouds (P), 6: 174–179

Resin coatings
The evolution of photographic base papers (IT), 4: 117–120

Satellite photography
Atmospheric corrections to satellite images in the presence of thin clouds (P), 6: 174–179

Scanning
Review of recent facsimile developments in Japan (T), 1: 21–29

Sensitometry
The use of central composite experimental designs to improve quality control of photographic negatives (P), 3: 80–87

Sharpness
Holographic image-deblurring filter (P), 6: 151–159
The reduction of the standing-wave effect in positive photoresists (N), 6: 184–186

Silver recovery
Ion-exchange silver recovery for process EP-2 with nonregenerated bleach-fix (P), 4: 106–110

Solvent recovery
Fluidized-bed recovery of volatile organic solvents (IT), 5: 139–142

Thermal ink transfer
High-speed thermal ink-transfer recording and its applications (P), 6: 171–174

Ultrasound
The application of directly heated photothermographic paper to echocardiology (P), 5: 129–132

Xerography
Electrical properties and imaging characteristics of CdS: Cu, Cl in the xerographic mode (P), 4: 102–105
